Degree programme

Business Administration is a broad-based degree programme with a wide range of options. You learn the relevant basics to master the challenges of the digital and interconnected world with intelligent strategies. How to manage a company strategically and operationally? How do the megatrends of digitalisation and sustainability affect companies? With scarce resources (keyword: climate change), good management is crucial to help the company or other organisations succeed in the long run.

Finance, strategic management, marketing, controlling and accounting, human resources or global supply chain management are important components of your studies that are equally relevant for start-ups and international corporations, public and non-profit companies. IT, legal basics, languages, soft skills, quantitative methods (maths and statistics) and interdisciplinary projects are also on the timetable.

Most courses are being offered either in German or in English. This is the perfect way to prepare for (voluntary) studies abroad at one of our many partner universities or for an international job.

Professional field

Whether a start-up or an international group, whether industrial, service or consulting companies: our graduates work in a variety of functions in these companies. In addition, non-profit organisations or state institutions open up career opportunities for you.

The Bachelor in Business Administration is also an ideal preparation for further Master's programmes.

Degree structure

The programme begins with the basics of the most important business functions and competences that you will need in your studies and later in your professional practice. This includes business and economics subjects as well as law, maths, statistics and IT. Interdisciplinary skills are taught in the key qualifications and language courses.

In the second stage of your studies, you can choose from a wide range of specialisation options in core areas of business administration, economics, law and

quantitative methods. An interdisciplinary course, a business management game and a scientific seminar round off the programme.

If you wish, you can spend a semester abroad at one of the university's approximately 180 partner universities. An internship is planned for the 6th semester. In the 7th semester, you complete your studies with the Bachelor's thesis.
